

Dear Hiring Manager,

I am excited to apply for the Digital Solution Business Analyst position within Macquarie's Portfolio Performance Monitoring team. With a strong background in data analytics, process improvement, and AI-driven workflow development, I am motivated by the opportunity to help transform how investment and portfolio teams leverage data to evaluate assets, identify value creation opportunities, and enhance decision-making across the private markets lifecycle.

In my recent work, I have supported business and technical teams by translating complex requirements into actionable data solutions. I've built analytics workflows using SQL, Python, and BI tools, automated manual processes, and developed structured outputs for AI-powered systems. This experience aligns closely with Macquarie's focus on enhancing digital capabilities, improving data quality, and enabling predictive, data-driven insights for investment teams.

I have a strong track record of partnering with stakeholders to understand business priorities, map processes, identify inefficiencies, and design solutions that improve visibility and operational performance. I'm comfortable working with both structured and unstructured data, documenting requirements, and communicating technical concepts clearly to non-technical audiences. My recent work with LLM-based automation and AI-assisted analysis also positions me well to contribute to Macquarie's digital and AI initiatives.

I am particularly drawn to this role because it sits at the intersection of analytics, technology, and private markets — an environment where thoughtful data strategy directly impacts investment outcomes. I would welcome the opportunity to bring my analytical mindset, technical skills, and collaborative approach to Macquarie's Real Assets platform.

Thank you for your time and consideration. I look forward to the opportunity to discuss how I can contribute to your team.

Sincerely,

Thierry Ogoubi
